The Master of Urban Design (MUD) is an advanced post-professional degree program for individuals who seek a career in urban design practice or for individuals who want to enhance and expand their existing foundation in architecture, urban planning, or landscape architecture with substantial urban design knowledge and expertise, giving them a distinct competitive advantage in the job market.

Normally, to apply to the MUD program, an individual must already hold a master’s degree in architecture, urban planning, or landscape architecture. However, the MUD Overlapping Degree Option gives students in the M Arch, MLA, and MURP programs at CU Denver the opportunity to apply to the MUD program and begin earning MUD credits before they complete their prerequisite master’s degree.

Not counting cross-listed electives, MLA students are allowed to take up to 9 credits of open electives offered by other programs. Presented above are the MUD program’s six required 3-credit lecture courses, which are available as open or cross-listed MLA electives, MUD lecture courses taken prior to a student’s acceptance into the MUD program can be applied retroactively toward the MUD degree.

The MLA degree requires 90 credits and the MUD degree requires 36 credits for a total of 126 credits to earn both degrees independently. MLA students can reduce that total by 3 credits with each MUD lecture course they take as an MLA elective. With two of the six required MUD lecture courses cross-listed as LDAR courses and with three more available as open electives, an MLA student could potentially take as many as five MUD required lecture courses as MLA electives, reducing the total credits required for both degrees by 15, from 126 to 111.
