

Jeremy Németh: Designing more inclusive public spaces

(2006-present)

- Public parks, plazas, and sidewalks are not universally accessible or inclusive. The ways in which we design and manage our public spaces suggests who we deem appropriate or desirable members of society. My work in this area has shown how public and private actors have historically sought to limit access to certain groups while limiting access to others, such as unhoused people, people of color, teenagers, protestors, skateboarders, and non-consumers. This work provides guidance on how to make spaces more inclusive to a diversity of uses and users.
- This project resulted in numerous articles in peer-reviewed journals, editorials in national newspapers, edited journals, and coverage in the *New York Times*, *The Guardian*, and the *Associated Press*.
- Funders: Center for Faculty Development, CU Denver; Institute for the Social Sciences
- Graduate student assistants: Sig Langedger, Michael Hinke, Evan Carver
