

# Data Dissemination on the High Line Canal

Kelsey Lindquist  
Prepared for the High Line Canal Conservancy

## The High Line Canal

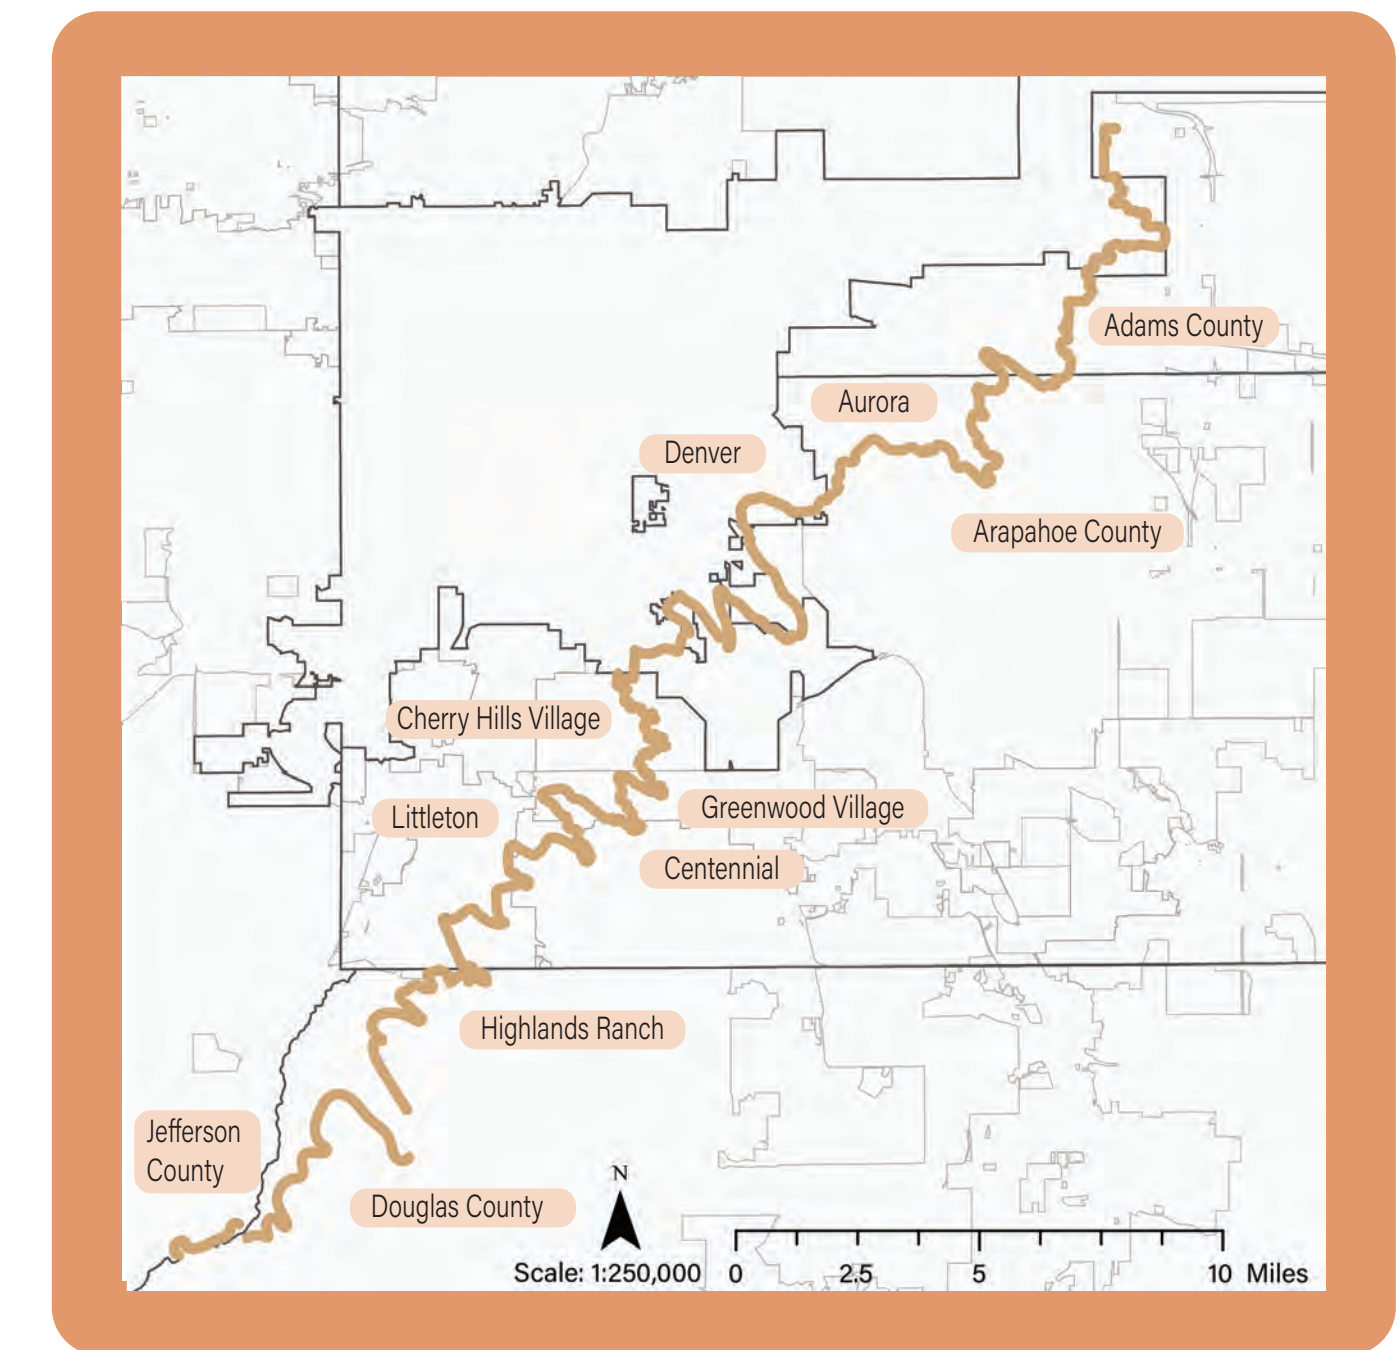

- 71-mile linear park with over 850 acres of land
- Constructed in 1883 as an irrigation canal
- Owned by Denver Water since 1924
- Passes through 11 governmental jurisdictions
- Jurisdictions have user agreements to maintain the recreational portion
- Plan to re-purpose the Canal for storm water to ensure its future as a recreational green way and an environmental refuge

## Problem

- Local jurisdictions are increasingly responsible for maintaining and improving the Canal
- There is no singular source for data on the Canal, making it difficult to access information and make decisions
- It is unclear which jurisdiction is responsible for maintaining assets along the Canal

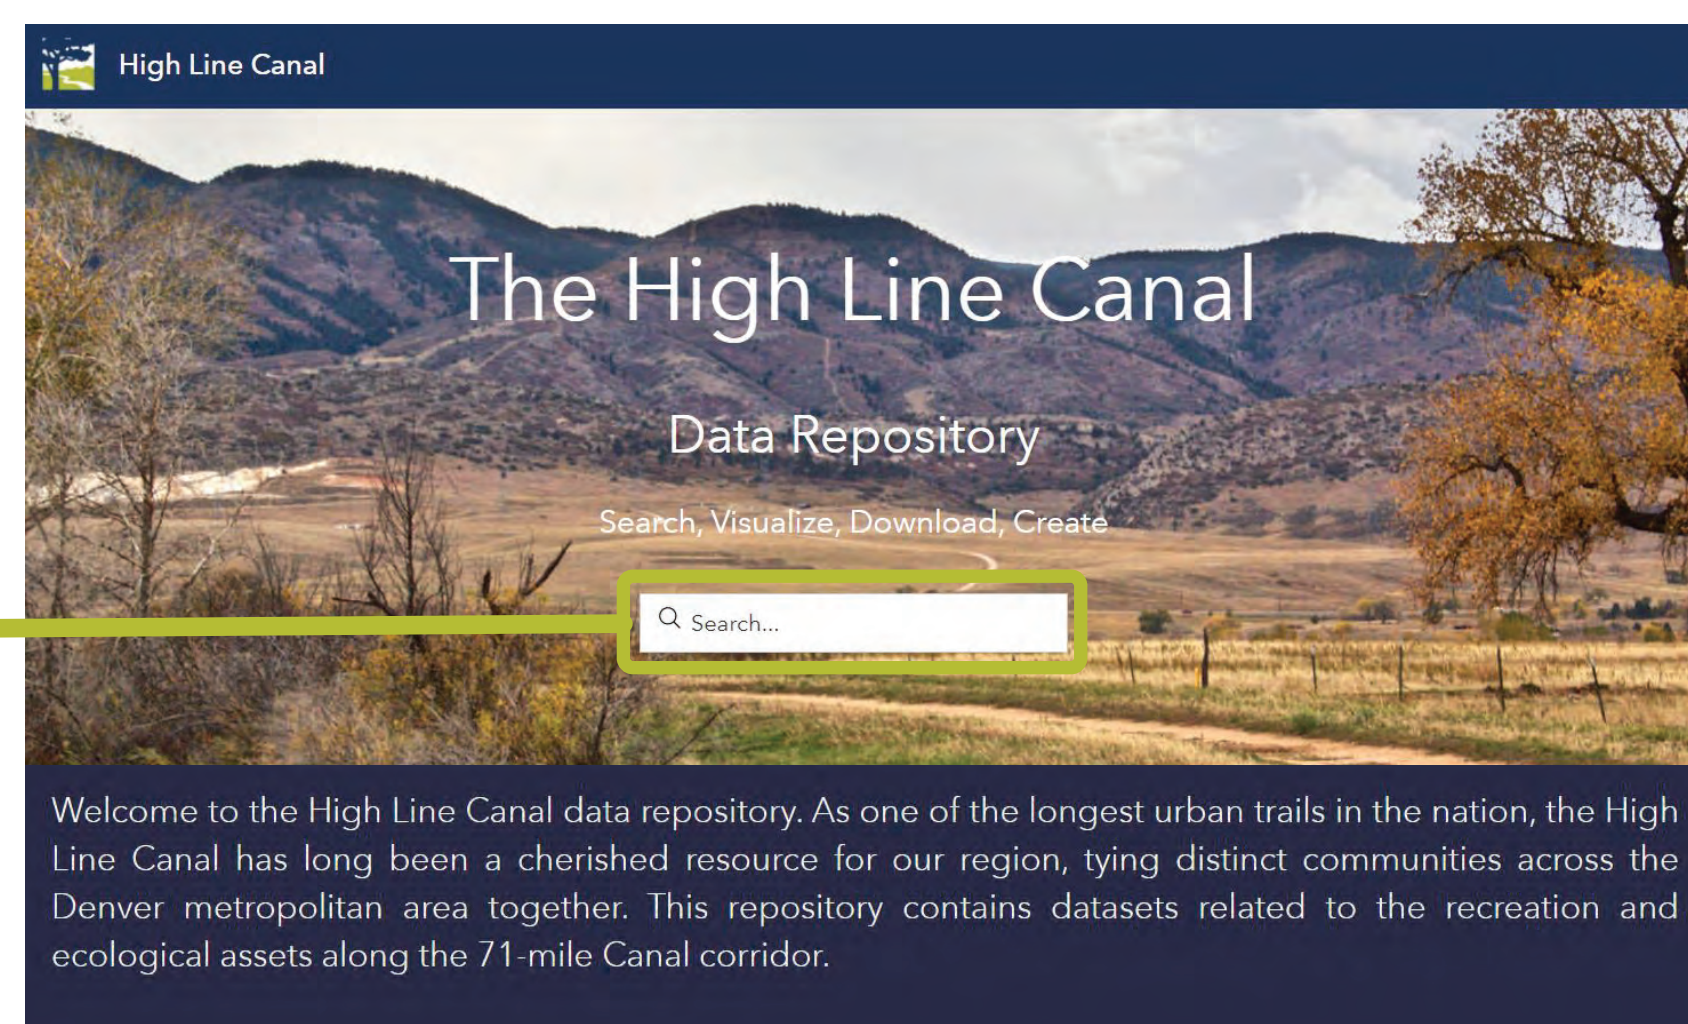

## Solution

- A data repository that houses a variety of datasets, maps, and other useful information on the Canal

## Data Repository Home Page

Created with ArcGIS Hub

The search function allows users to quickly and easily find information.

Users can click on data categories to access a tailored list of available datasets.

All types of information can be displayed on the Hub, such as Story Maps, dashboards, and interactive maps.
